

CASE STUDY

Sector:
Logistics
Contract:
Mechanical Design & Build

AFTER

Airmaster have completed the full design and build mechanical of a replacement air conditioning system for the B&Q National Distribution Centre in Worksop.

As a Daikin D1+ dealer & installer, Airmaster Air Conditioning Ltd along with several other local D1+ rated companies were invited to tender for the large Air Conditioning replacement project at the B&Q Distribution Centre in Worksop.

We were asked to present 2 tender applications, the first to carry out a full like-for-like AC replacement of the existing 15 year old Sanyo systems, the second was to put forward our own design & build application.

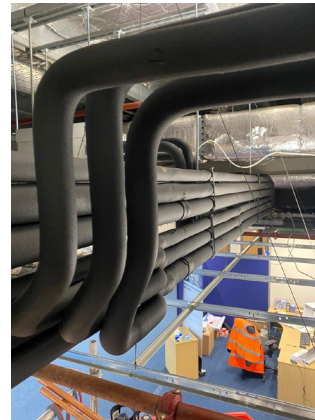

The Airmaster contracts team presented a perfect tender application which included a full Hevacomp thermal imaging building report, giving us the precise up to date technology to supply the correct AC equipment in the right areas, this was carried out by our in-house design team at Airmaster.

BEFORE

The project included; the full removal of the existing AC systems, with full replacement of 6 large Daikin Europe VRF systems, 2 comms room double split systems, the project also included the Daikin 'reclaim with confidence' and 'commission with confidence' package. This was finished with a full mains electrical upgrade to all internal and external AC systems.

This was carried out on a very tight 8 week timeframe, along with all buildings still in full use and strict Covid restrictions earlier this year, the Airmaster Air Conditioning Ltd team pulled out all the stops to complete a fantastic project on time.

The B&Q Worksop, Engineering & Facilities Manager Dave Horton and his team were brilliant to work with and had nothing but praise for the Airmaster installation engineers.

"Well done to everyone involved at Airmaster. Your tender submission was spot on, fulfilling the brief perfectly and then going beyond it too. The project ran like clockwork thanks to your

professionalism. The client understood the long-term importance of marrying a high-quality installation with high quality equipment. A great project."

Paul Wilkins, Corporate Clients Division Manager at Daikin
